Base dust extraction system, for CAD/CAM dental milling machines.

BOFA's DentalPRO Ride On Base dust extraction system effectively removes smaller particulates generated during the CAD/CAM milling of dental implants. The unit is designed for a CAD/CAM milling machine to be securely placed on top of the extraction system, which itself doubles up as a space saving stand.

The unit's high efficiency two stage filtration process allows technicians to work safe in the knowledge that dust particles are being effectively removed, to maintain a clean working environment. The bag filter has a large 18 litre capacity and the HEPA filter has an efficiency of 99.997% down to 0.3 microns.

The high vacuum pump is brushless and designed for continuous running for longer periods of time before requiring servicing.

An added optional extra is an onboard compressor providing the miller with clean oil-free air for all compressed air requirement.

Technology

HEPA filter

Multi voltage
sensing (MVS) unit

ProTECT service
plan

SureCHECK
quality standard

Key features of the DentalPRO Base

Sit on unit - providing a space saving stand
Standard

Auto sensing voltage (90-257v) for global use
Standard

HEPA filtration
Standard

High efficiency 5 layer large capacity easy change filter
Standard

Quiet in operation
Standard

On-board compressor for clean, oil-free air
Optional

Digital speed control - For variable airflow rates
Standard

High vacuum pump for effective capture from source
Standard

Filters with long life and low replacement cost
Standard

Filter full indicator
Standard

Remote stop / start interface
Optional
