Industrial particle and dust extractor.

BOFA's DustPRO 50 extraction unit has been developed for the safe and effective removal of swarf and smaller particulates during processes such as routing, mechanical engraving, grinding and turning.

One of the main problems with other router extraction relates to the type of pump used. Most have brushed motors which are noisy in operation and frequently burn out.

The pump used in the DustPRO 50 is brushless and designed for continuous running for longer periods of time before servicing.
